

Oliver Hidalgo

Software Engineer

I'm a software engineer with over 7 years of experience across diverse industries, including BPO, Higher Education, and Administrative Services using agile methodologies like SCRUM. Throughout my career, I have developed scalable software solutions and integrated systems using a variety of mechanisms, such as SOAP and REST web services, GraphQL, RPC, and custom libraries. I have strong backend expertise with complementary frontend experience, including dynamic user interfaces, reporting, and automated processes such as synchronization and batch processing. I prioritize well-structured design and meticulous development to create scalable, high-quality solutions that align with business needs. With my expertise and commitment, I am confident in delivering value quickly, while continuously adapting to the specific needs of the company and its products or services.

Experience

[AUGUST 2022 – PRESENT]

Software Engineer II | Conduent Business Services – US | Offices around the globe

- Perform end-to-end software development lifecycle for multiple software modules related to invoice processing.
- Analyzed, designed, and developed EDI parser/reader services to extract data from invoice batch files (e.g., EDI 810) for multiple providers of a client.
- Designed modular and configurable components using C# Windows Services, which can be easily adapted to accommodate different business requirements and integrate with various systems, including a decryption module, a PDF and XML generator module, compression, and database/file cleanup modules.
- Conduct comprehensive testing and quality assurance to ensure the robustness, reliability, and optimal performance of the software delivered.
- Used SQL Server to efficiently store and manage process information in the database.

[SEPTEMBER 2017 – AUGUST 2022]

Software Developer | Universidad del Valle - Guatemala

- Participated in the entire software development lifecycle, working on diverse administrative modules as well as academic modules, implementing new requirements or change requests to align software solutions with business needs.

Professional Services Billing Automation

- Analyzed and developed REST APIs in Node.js to retrieve sync process data, exposed them, and created a user-friendly GUI in Angular implemented in the Intranet System, enabling manual synchronization of appointments and contract information.
- Created essential stored procedures in SQL Server to retrieve and validate teacher appointment data, then transformed it to match HR contract requirements (job roles, employment periods, remuneration, person's file, etc).
- Developed a REST API in Node.js to retrieve and validate data from the HR spreadsheet and integrated it with Microsoft GP SOAP Web Services for data transmission.
- Implemented essential SOAP Web Services in GP to enable interaction between the GP GUI and spreadsheet data.
- Utilized the GP eConnect API to create a schema and automate payment distribution according to business rules.
- Contributed to designing the automatic and manual sync process.

Online Payment Requests

- Built a microservice REST API using Node.js and GraphQL to get, validate, and expose the necessary data to create a payment request (applicants, cost centers based on business unit, authorization steps, routes, etc).
- Contributed to the design and implementation of a flexible workflow in Microsoft Power Automate.
- Implemented the base form in Angular, considering recurring elements that could be reused across various forms.
- Employed the REST API to retrieve data input into the form, validate it, save attachments using the Filesystem module, and forward the information to Microsoft Power Automate.
- Utilized a Power Automate API component to expose and retrieve all authorization step information and consumed it through the REST API to store the data in the database.
- Leveraged Power Automate's capabilities to manage the authorization workflow and notifications to users.

Learning Management System Integration

- Created SQL Server stored procedures responsible for extracting, validating, and transforming data associated with courses, enrollments, users, terms, and accounts.
- Contributed to generating Microsoft Integration Services Packages designed to retrieve and generate CSV files, which were then loaded into the LMS via the SFTP server.
- Initially implemented C# SOAP web services, later transitioning to a Node.js REST API for retrieving data related to grades, task groups, tasks, and performance managed in the LMS.
- Created stored procedures to validate, transform, and store this information in the database, facilitating the generation of academic performance reports for directors.

Others

- Conducted thorough user acceptance testing to verify that the new functionalities met user expectations and contributed to an improved user experience.
- Developed comprehensive, well-structured reports on various areas such as processes, Human Resources, and academia.
- Collaborated closely with cross-functional teams to ensure effective delivery.
- Technologies used: SQL Server, JavaScript, Node.js, Express.js, Angular, GraphQL, C#, Visual Basic, Crystal Reports, PostgreSQL, RedisDB, Linux (Ubuntu, CentOS), GitHub, Bitbucket, Git, SVN, Docker, HTML, CSS, Bootstrap 4, NGINX, Microsoft Excel, Confluence, Jira, Microsoft Test Manager, Microsoft Team Foundation Server.

Education

2014-2020 | Bachelor of Computer Science | Universidad Mariano Gálvez de Guatemala

2023 | NodeJS Application Developer | Linux Foundation

2023 | Certified Kubernetes Application Developer | Linux Foundation

2020 | Scrum Master Certified | ScrumStudy (VMEdu)

2020 | Six Sigma Yellow Belt | SixSigmaStudy (VMEdu)

2018 | Java Full Stack Developer | Fundación Kinal

Technical Skills

- **Programming Languages:** JavaScript, C#, TypeScript, Visual Basic, Java
- **Frameworks/Libraries:** NodeJS, Express, React, .Net, GraphQL, Angular 4+, Spring
- **Testing:** Microsoft Test Manager, Zephyr, Jest
- **Methodologies:** SCRUM, Traditional
- **Database:** MS SQL Server, MySQL, RedisDB, MongoDB
- **IDE'S:** Visual Studio Code, Visual Studio, NetBeans
- **Application Servers:** Microsoft IIS, NGINX
- **Other Skills:** Github Actions, HTML, CSS, GitHub, Bitbucket, Git, SVN, Dockers, Kubernetes, Crystal Reports, Bootstrap 4, Microsoft Excel, Confluence, Jira, Microsoft Team Foundation Server, Integration Services Packages.
